Streamlining & Managing
ACCREDITATION

For Food Processors
Who Make Quality the #1 Priority

Compliance with federal regulations, internal standards, and customer requirements is essential to functioning and flourishing in today's food industry. While there are many methods for achieving these levels of quality, not all solutions provide the same results.

With Qualtrax, you not only assure basic compliance, but also improve the efficiency of your business by automating formerly manual processes.

Qualtrax provides the necessary tools to address USDA, HACCP, FDA, ISO 22000, BRC, SQF, and GFSI standards.

Why Qualtrax?

Combining a robust document control engine with automated workflows, standards-based auditing, and employee testing capabilities, Qualtrax is an all-in-one compliance solution for ISO and other quality standards, accreditation requirements, and managing both internal and external audits.

FEATURES AND BENEFITS

Document Control

- Keep policies and work instructions up-to-date.
- Ensure only the most current version of any document is available for reference.

Document control solves the control issues associated with paper-based documentation and improves accessibility to important information.

Testing, Training & Reporting

- Tests can be "stand-alone" or associated with any document.
- Store training records and test results for employee files.
- Design and run custom reports on the status of documents and workflows.

Testing standardizes and expedites employee training and maintains searchable records of certifications and testing results. Reports provide visibility to process bottlenecks.

Standards-Based Auditing

- Each document is associated with specific sections of given standards and can be searched accordingly. There are unlimited standards.
- Administrators can perform gap analyses to identify missing documentation.

This tool significantly reduces the time needed for internal and external audits

Workflows

- Automate paper-based processes.
- Items needing attention collect in one place, notify the owner via email alerts, and escalate based on assigned due dates.

The workflow engine streamlines business processes and eliminates unnecessary paper.
